

QR Code Generator

An alternative mobile marketing tool

QR Code Generator generates QR Code to encapsulate information required for processing in secure manner. It has the capability to validate, track, provide encryption and invalidate QR Codes during processing. This innovative service can be read by wide range of smartphones.

Encryption of QR Code

The QR Code Generator offers both encryption and decryption of QR Code. This service supports both self-service portal for QR code generation and defining the validity time frame of QR Code.

Admin Portal

- Allows administrators to maintain the system settings for QR Code Generator.
- Secure authentication is required before administrators can login to the single admin console in order to manage the contents.

Usability

Mobile Security is tightly integrated to the MLEB suite of products including Mobile Wallet, Mobile Virtual Real Super Mall, Mobile Point of Sale and etc.

Potential use cases for QR Code Generator

Mobile Point of Sale - QR code payment

QR code generator is embedded with mobile security encryption technology to provide extra layer of security to customer and enterprise.

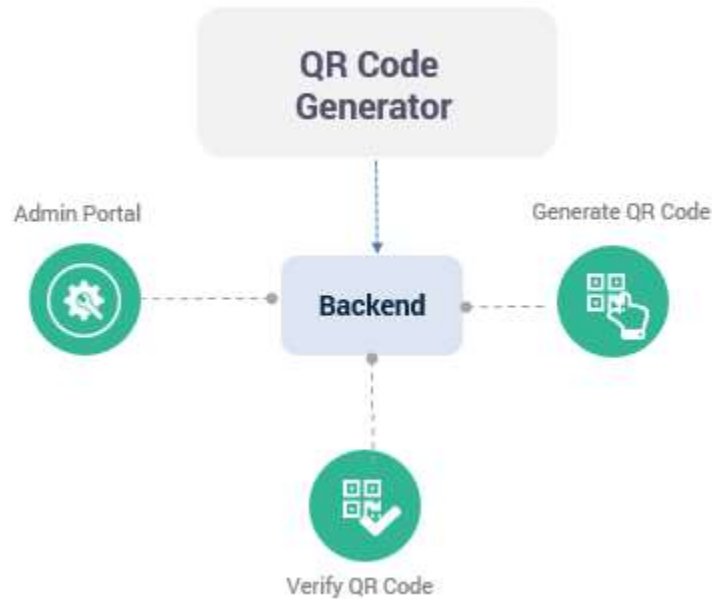

Mobile Wallet – Business Card

Mobile Wallet is offering an innovative way of sharing business card information via QR Code.
